

Project Name:

Machine Drawing Database

What was the problem

- Machine drawings and documentation were scattered into several locations, both hard copy and electronic copies.
- Rev control was difficult because of technicians using photo copies and hand written notes.

Lean Solution

- Develop an online database where by the engineering department can release drawings and technical data sheets to the technicians on the production floor. This database would be used as a central location for all technicians to receive the latest revisions for all documentation.
- The database will also be used in technical support situations for quick access to customer machine information.

Client Feedback

The drawing application has resulted in improved rev control to the production floor. They have realized a reduction in printing due to the online, electronic copy availability. With reduced printing, they have saved money on print toner and paper consumption.

Using our custom developed lean tools, all of our customers have experienced substantial cost savings. In EVERY case, our solutions have saved our customers thousands of dollars and have paid for themselves in less then 6 months. Contact us today to setup a consultation and stop throwing money out the window!

Lean Process Company:

Rhetech Inc.
